PROFILE

Aspiring and dedicated BCA student with a specialization in Artificial Intelligence and Machine Learning, driven by a passion for coding and problemsolving. Equipped with a solid foundation in computer science and hands-on experience in AI and ML technologies through academic projects and coursework. Eager to leverage my skills and knowledge to contribute to innovative development projects and grow as a professional web developer

PROJECTS

Library Management System

Using Python

- The system should allow adding, updating, and deleting book records. Each book record typically includes fields such as title, author, ISBN, genre, and availability status.
- The system should manage member records, including adding new members, updating member information, and removing members.
- The system should validate user inputs to ensure data integrity and prevent errors.

Student Management System

Using C programming language

- The system is designed to handle large amounts of data efficiently, making use of C's compiled nature to ensure fast execution.
- The system is modular, with each function or operation encapsulated in its own function

Portfolio website

Using HTML, CSS and JavaScript

link: [https://sky-](https://sky-210607.github.io/portfolio-final/)

[210607.github.io/portfolio-final/](https://sky-210607.github.io/portfolio-final/)

- Developed by using HTML tags. This includes sections like the navigation, home, about, education, skills, projects, contact.
- Developed by using CSS to style the different components of the website.
- Used JavaScript to add interactivity to website. For example, a smooth scroll effect for navigation links.
